PROFILE SUMMARY		
Technical Game Designer with 3+ years of experience building and shipping gameplay systems across Unreal Engine (C++) and Unity (C#). I specialize in end-to-end feature ownership, from conceiving core gameplay loops and mechanic rulesets to production-ready implementation. My background spans two shipped titles and current work on an indie title, alongside enterprise-grade backend systems. I bridge creative vision with pragmatic engineering.		
WORK EXPERIENCE		
Technical Game Designer (Independent), Wrought Studio		June 2022 – Present
- Directed end-to-end development for the debut IP Last Day Lockdown, managing the complete pipeline from C++ system architecture to level design execution. - Architected modular gameplay systems in C++, creating a scalable interaction framework that allowed for rapid level iterations and systemic consistency without code debt. - Established design leadership for external clients, transforming raw technical prototypes into cohesive products by defining core combat loops and authoring adaptive economy models for live-service titles. - Executed technical implementation for a shipped indie title in Unity using C#, integrating audio middleware and wiring gameplay events to adaptive soundscapes and dynamic triggers.		
Unreal Developer, Zonk Studios		May 2024 – November 2024
- Spearheaded the architectural migration of the codebase from legacy Blueprints to C++, establishing strict coding standards that optimized runtime performance and stability. - Re-engineered the UI pipeline using a modular MVVM (Model-View-ViewModel) pattern, decoupling interface logic from gameplay systems to resolve critical desync issues. - Architected the multiplayer Lobby and Loadout systems for the shipped live title Phantom Blaze, integrating backend APIs to ensure robust persistent data management and seamless session handling.		
Senior Systems Engineer, Infosys		July 2021 – March 2024
- Engineered the core interaction layer for high-traffic consumer portals using C# .NET, optimizing API response times to ensure seamless end-user experiences across logistics platforms. - Served as the primary technical liaison for the American division, leading architectural alignment and development sprints with European sister branches to ensure unified product delivery. - Delivered critical consumer-facing features, translating complex logistics business requirements into robust C# modules that ensured high availability and data accuracy for the end-user.		
GAME JAMS		
Solo Developer, GMTK		2023
- Engineered a "World Movement" mechanic, manipulating environment physics around the player in real-time. - Shipped a polished systemic gameplay loop as a solo developer within a 48-hour deadline.		
Technical Game Designer, GMTK		2022
- Implemented responsive combat mechanics and enemy logic in Unreal Engine within a 48-hour cycle. - Designed the core combat loop, prioritizing responsive controls and satisfying hit feedback for engagement.		
Technical Game Designer, Sogeti X Intel		2022
- Designed systemic AI behaviors, defining detection rules and patrol states for tension-based stealth. - Achieved Finalist standing by delivering a stable, mechanically complete vertical slice prototype.		
HONORS & AWARDS		
Selected Showcase, Epic Games Booth, IGDC		2025
Selected by Epic Games to showcase Last Day Lockdown at the official Unreal Engine booth.		
National Media Feature, CNBC-TV18		2025
Last Day Lockdown and Wrought Studio broadcasted and featured on national television.		
Nominee, Upcoming Game of the Year, IGDC		2024
Last Day Lockdown nominated for the prestigious Upcoming GOTY award.		
Two-Time Finalist, Bharat Tech Triumph		2024/25
Recognized as a finalist for excellence in gaming innovation and technology.		
Finalist, Sogeti x Intel Game Jam		2022
Achieved finalist standing for rapid prototyping and technical execution.		
CLM Transformer Award, RXO, Infosys		2022
Received client recognition for outstanding contribution to the logistics transformation project.		
EDUCATION		
Course	Year	Institution
B.Tech. CSE (Graphics and Gaming)	2017-2021	Galgotias University
